Abstract: Owners and operators of secondary aluminum production facilities are required to comply with reporting and record keeping requirements for the general provisions of 40 CFR Part 63, Subpart A, as well as the applicable specific standards found at 40 CFR Part 63, Subpart RRR. This includes submitting initial notifications, performance tests and periodic reports and results, and maintaining records of the occurrence and duration of any startup, shutdown, or malfunction in the operation of an affected facility, or any period during which the monitoring system is inoperative. These reports are used by EPA to determine compliance with the standards.

Form Numbers: None.

Respondents/affected entities: Secondary aluminum production facilities.

Respondent's obligation to respond: Mandatory (40 CFR Part 63, Subpart RRR).

Estimated number of respondents: 161 (total).

Frequency of response: Initially, occasionally and semiannually.

Total estimated burden: 12,200 hours (per year). Burden is defined at 5 CFR 1320.3(b).

Total estimated cost: \$5,340,000 (per year), includes \$4,110,000 annualized capital or operation & maintenance costs.

Changes in the Estimates: There is a decrease in the total estimated burden as currently identified in the OMB Inventory of Approved Burdens. This decrease is primarily a result of updating the number of sources. A recent industry analysis conducted during development of the 2015 final rule indicates a substantial decrease in both the number of major and area source facilities subject to the rule from the estimates used in the previous ICR renewal.

Note this ICR merges the burden from EPA ICR Number 2453.01, the ICR for the 2015 final rule. Therefore, this ICR reflects additional burden items not present in the previous renewal. In addition, this ICR revises bag leak detector costs per comments received from the Aluminum Association. These changes result in an overall increase in the capital and O&M costs.
